CATAPULT ENHANCES LIVE ATHLETE MONITORING TO UNLOCK REAL-TIME INSIGHTS FOR FASTER DECISION MAKING

- New live features allow for faster decisions and easier workflows when it matters most.
- Continues Catapult’s decades of innovation as industry leader for elite athletes.

JUNE 30, 2022

Catapult Group International Limited (ASX:CAT, ‘Catapult’ or the ‘Company’) the global leader in sports technology solutions for elite teams, today announced new features to enhance real-time data analysis within its Vector athlete monitoring solution. It is now easier for teams and coaches to make decisions straight from the sidelines, saving them the hours typically spent analyzing athlete data after practice and competitions.

As the leading athlete monitoring system in sports, the Vector SaaS technology provides teams with powerful athlete performance data allowing staff to make objective decisions about athletes, maximize their performance, and avoid costly injuries. The Vector solution uses both Global Positioning System (GPS) and Local Positioning System (LPS) technologies so athletes can move seamlessly between indoor and outdoor environments without disruption.

Within the Vector Live app, sports scientists and strength coaches can now more easily capture detailed athlete data directly from the sidelines, keep coaches informed instantly, and impact game or practice strategies in real-time.

**Objective Adjustments from the Sidelines:** Coaches can manage athlete workloads live, ensuring they maximize every second of player performance. With individual targets for each athlete, they can see when athletes are under- or over-performing their thresholds and make in-game adjustments rather than waiting for post-game analysis and risking costly injuries.

**Live Player Comparisons:** Real-time player comparisons can inform game strategies without having to wait for lengthy post-game analysis. Whether in training or in games, coaches can compare athlete-to-athlete performance or compare individual athletes to both pre-set targets and historical data to see which players are performing at their best.

**Instant Benching Capabilities:** Data analysis can now move as quickly as the game. Coaches are able to instantly swap players in real-time and maintain intensity data, including speed, acceleration, and heart rate, during player changes, never losing a minute to manual tasks and analysis.

Vector is used at the most elite levels of competitive sports, and allows teams to prepare for the demands of any competition by managing player workloads and monitoring individual athlete development. The Vector athlete monitoring system has the highest standards for accuracy, reliability, and efficiency to empower critical decisions about player performance, risk of injuries, and return to play.
According to Jack Christopher, Head of Academy Sports Science and Physical Fitness at Chelsea FC Academy, "With the new updates to the Vector Live App, we have been able to input historical data for every individual, so we can understand how much they have completed compared to their own individual norms and decide if they are doing too much or too little. This allows us to make accurate real-time decisions on athlete loading and save time in post-session editing."

"Customers around the world tell us they rely on our data and insights to make better decisions and save critical coaching hours," said Will Lopes, CEO of Catapult. "Just a few short months after we released the first-of-its-kind video and wearable data integration for soccer and rugby, we continue to innovate our most trusted solutions. Now our customers are able to use Vector Live to make objective decisions even faster directly from the sidelines. Our ability to save coaches time is why we continue to be the undisputed industry leader."

In a recent survey of top collegiate and professional teams from around the world, the news outlet SportTechie reported that 43% of respondents said their coaches were more data literate than ever before. And 57% of teams reported plans to increase their spending on technology to improve player health and performance over the next year.

Catapult has been revolutionizing the sports industry with best-in-class athlete wearables since 2006 and has a strong history of being an innovation leader at all levels of play. Today the Vector solution is trusted by top teams in the English Premier League, German Bundesliga, Spanish Premier League, NFL, NBA, NHL, MLB, AFL, and NRL.

About Catapult

Catapult exists to unleash the potential of every athlete and team on Earth. Operating at the intersection of sports science and analytics, Catapult products are designed to optimize performance, and quantify return to play. Catapult has more than 500 staff based across 28 locations worldwide, working with more than 3,400 elite teams in over 100 countries globally.
